

30-Day Check-In.

PERIOD

Apr 13 — Jun 3, 2026

MILESTONE

First month live

PREPARED

June 3, 2026

AGENDA

What we'll cover today.

01 Progress recap

Where the first 30 days landed

02 Your objectives

What we set out to do together

03 Usage highlights

How faculty are engaging, in detail

04 Feedback

What's working, what's missing

05 Next 60 days

Where we focus from here

A strong first month — **143 active researchers** and 476 grants opened.

2,196

Page views

Across 143 active researchers

476

Grant page visits

230 distinct grants explored

134

Searches run

By 32 distinct researchers

44

Favorites

44 grants saved by 13 researchers

Half the Cortland roster engaged with Atom in month one.

ACTIVATED

143

Loaded at least one page in the first month — half the provisioned roster.

EXPLORED GRANTS

87

Opened at least one grant detail page, not just the dashboard. The high-intent core.

YET TO ACTIVATE

141

Have a profile but no recorded activity yet. The clearest month-two opportunity.

YOUR OBJECTIVES

What we set out to do together.

01

Improve grant matching quality

Use Atom's AI to understand meaning and intent, rather than keyword matching or manual filtering.

MONTH-ONE SIGNAL

230 grants explored across 115 funders — broad, intent-driven discovery.

02

Increase faculty engagement

Drive engagement with funding opportunities through automation — especially the weekly personalized digest and proactive outreach.

MONTH-ONE SIGNAL

143 active in month one; the weekly digest is the channel to scale next.

03

Demonstrate ROI in year one

Build engagement and outcomes data so any pricing increase beyond the year-one price match to SPIN can be justified.

MONTH-ONE SIGNAL

First data point logged; the next 60 days build the case.

Launch drove a surge — engagement is settling into a steady weekly rhythm.

307 visits

In the two launch weeks (May 4–17) — 64% of all month-one grant traffic

~50 / week

Steady rate once the launch spike settled (weeks of May 18 on)

*partial

Week of Jun 1 covers 3 days (through Jun 3) — already 30 visits

Researchers are going deeper at every step, from browse to save.

Each step is a stronger signal of intent. **87 researchers** went past browsing to open a specific grant, and 13 have already saved opportunities to return to. **11 have tried Atom's AI assistant** — the newest surface and the clearest place to grow in the next 60 days.

Adoption is **broad** — a dozen-plus departments active in month one.

DEPARTMENT	ACTIVE USERS	% OF DEPT	PAGE VIEWS	ENGAGEMENT
Health	9	64%	164	
Academic Affairs	3	75%	111	
Kinesiology	11	55%	107	
Economics	7	44%	94	
Psychology	9	56%	89	
Physical Education	9	60%	75	
Foundations & Social Advocacy	7	70%	62	
Political Science	3	50%	58	
English	5	28%	51	
Biology	9	64%	42	

Faculty departments only. The Office of Research & Sponsored Programs (the team driving rollout) is shown separately on the researchers slide.

Researchers are casting a wide net — 115 funders explored in month one.

MOST-VIEWED FUNDERS · FIRST 30 DAYS

U.S. National Science Foundation	48
Russell Sage Foundation	43
National Council of Teachers of English	15
American College of Sports Medicine Fdn.	14
Health Resources & Services Admin.	14
Henry Luce Foundation	13
Anthropic	13
National Academies (NASEM)	12
National Institutes of Health	10
Office of Elementary & Secondary Education	10
Campus Compact	10
Society for the Teaching of Psychology	8

WHAT THE MIX SHOWS

No single funder dominates. Researchers spread **476 visits across 115 funders** — a wide, exploratory pattern that's healthy for a first month.

The mix reflects Cortland's breadth: federal science (NSF, NIH, HRSA, Dept. of Education), major foundations (Russell Sage, Luce), disciplinary societies (NCTE, ACSM, APA), and newer industry funders like Anthropic.

BREADTH OF DISCOVERY

230 grants

Distinct opportunities opened across those 115 funders in 30 days.

Searches map directly to Cortland's **research strengths**.

Aging, health & caregiving

older adults rural maternal health caregiving hospice care

health disparity

The most-searched cluster — aging populations, maternal and rural health, and end-of-life care.

Kinesiology & sport science

athletic training resistance training musculoskeletal

recreation & community

Athletic training, exercise physiology, and community recreation — a strong Kinesiology signal.

Education & the humanities

adjunct development literacy community arts (NYS) NYS archaeology

Faculty development, literacy, the arts, and New York State heritage and history.

Social & behavioral science

voting behavior in America STEAM research in Japan toxicology / zebrafish

Political behavior, international STEAM education, and environmental toxicology.

134 searches from 32 researchers · queries lightly edited for clarity.

Traffic is dashboard-led — the email digest is **just ramping**.

VISIT SOURCE · FIRST 30 DAYS

The **email digest** is the lever for the next 60 days.

Month-one traffic is dashboard-led — researchers are logging in and browsing on their own. Email already drives 30% of visits, and it's the channel that compounds: at mature deployments the weekly match digest becomes the majority of all traffic.

Turning on a consistent weekly digest cadence is the single biggest lever on sustained engagement.

The ten most active researchers on Atom so far.

#	NAME	DEPARTMENT	PAGE VIEWS	GRANT VISITS	SEARCHES	FAVORITES
1	Matthew Trail	Research & Sponsored Programs	465	109	17	0
2	Dominick Fantacone	Research & Sponsored Programs	334	18	3	0
3	Jennifer Hall	Academic Affairs	72	12	17	0
4	Geunhye Park	Health	58	11	14	5
5	Nancy Kane	Physical Education	54	2	3	0
6	Jill Murphy	Health	51	17	11	0
7	Kim Nguyen-Nalpas	Psychology	51	27	1	6
8	Mason Kim	Political Science	45	6	5	0
9	Rob Haggar	Economics	43	12	0	0
10	Katie Ducett	Foundations & Social Advocacy	38	25	0	0

The top two are the Office of Research & Sponsored Programs team driving campus rollout; the rest are faculty across eight departments.

FEEDBACK

Where are we getting it right — and **what's missing?**

MATCHING QUALITY

Are the grants Atom surfaces genuinely relevant to your faculty's work?

THE WEEKLY DIGEST

Is the cadence and content right — and where would you tune it?

GAPS

What funders, features, or departments still feel missing?

ROLLOUT

What would help bring the other half of the roster on board?

NEXT 60 DAYS

Three priorities for the next 60 days.

01

Activate the other 141.

Half the roster hasn't opened a page yet. Department-targeted first-touch emails — one high-relevance grant each — are the highest-leverage move. Start where rosters are large but penetration is low: English, Sociology, Biology.

02

Lean on us for rollout support.

We'll provide whatever helps adoption — a live faculty demo or webinar, department-specific one-pagers, ready-to-send outreach email templates, and office hours for your team. Tell us which formats land best at Cortland.

03

Drive AI assistant adoption.

Only 11 researchers have tried Atom's AI chat — the surface where intent-based matching shines. A short faculty demo plus a digest feature can move it from a handful of users to a habit, and start building the year-one ROI story.
